

Alliance for Physics Excellence (APEX) Physics Teaching Research Program (PTR)

Dennis Sunal, JW Harrell, John Dantzler, Cynthia Sunal, Marsha Simon, Donna Turner, Tara Ray, Michele Wooten, and Marilyn Stephens (PTR Team) University of Alabama

Alliance for Physics Excellence

The goal of the *Alliance for Physics Excellence* (APEX) program is to integrate researchbased teaching practices into Alabama physics classrooms via in-service teacher education, and evaluate the impact on physics teachers and their students in the state's school systems.

Teacher Action Research

Action Research is a strategy for extending APEX professional development and facilitating change in your physics teaching

Action Research Facilitates Change in Beliefs

- Over the last two summers we said.....
- > All teachers have beliefs which guide their teaching.
- > Beliefs are constructions of reality.
- Can you determine which of your beliefs are "truthful" or "misconceptions"?
- > The process of changing is the process of changing beliefs.
- How do you change beliefs?
- > How can you change your beliefs about physics teaching?

Professional Development through Teacher Action Research

What is the Action Research process that will help you monitor your progress in using the APEX PTI information and understandings from the past 1¹/₂ years?

- How will your study add to your understanding of the problem and question?
- What are the different kinds of evidence (documentation) are you using to answer your research question? Three sources are needed to give you confidence and understand the result.

Reflections on Teaching Physics During Fall 2014

1. Christina Caldwell 6. Angela Olguin

- 2. David Hall 7. Cynthia Phillips
- 3. Mara Johnson 8.
- 4. Mark Maddox

- 8. Rochelle Williams
- 9. Timothy Williams

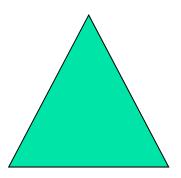

5. Angela McLeod

APEX Cohort 1: Action Research Activity with Force and Motion Unit #2, Fall 2014

- Description of context of the Force and Motion unit
- Lesson plans or lesson outline of unit
- Daily diary of events that occurred
- Administer students' pre and post revised FCI test
- Interview your students
- Narrative reflective summary of the action research activity- What did you learn? What was the evidence?
- Present, compare, and reflect on your results during the 2nd APEX weekend workshop of 2014-15 school year

Different Kinds of Evidence Used?

How do these three sources work together to answer your question?

APEX Cohort 1: PTI Action Research Reflection Activity

Physics Units taught in Fall 2014

Based on your reflections on teaching physics as a result of additional intensive workshops in Summer 2014 and the Weekend Workshop in November. Report your thoughts on teaching this year so far.

1a. Describe the Force and Motion unit you investigated during fall2014?

1b.Has your physics teaching changed so far during APEX?

What evidence can you provide for this?

2. What was different from what you did previously, that worked well? 3. What was different from what you did previously, that worked well?

What evidence can you provide for this?

What evidence can you provide for this?

4. What do you want to try that you did not do?

What evidence can you provide for this?

5. What kinds of results/products did these changes produce in your students?

What evidence can you provide for this? In your own beliefs about teaching physics?

> What evidence can you provide for this?

- 1a. Describe the Force and Motion unit you investigated during fall 2014?
- Ib.Has your physics teaching changed so far during APEX?
- 2. What was different from what you did previously, that worked well?
- 3. What was different from what you did previously, that worked well?
- 4. What do you want to try that you did not do?
- 5. What kinds of results did these changes produce in your students, in your own beliefs about teaching?

6. How can share and disseminate what you have done in your classroom as innovative teaching?

> What evidence can you provide for this?

Inquiry Teacher's Actions and Students' Responses

Essential Features of Classroom Inquiry and Their Variations

Essential Features	1	2	3	4	5	6		
of Inquiry	Full Inquiry Teaching (Can Use Learning Cycle)	Coupled Inquiry (Can Use Learning Cycle)	Guided Inquiry	Directed Inquiry	Verification	Expository		
More <								

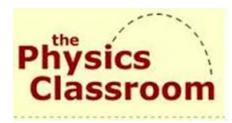

Less < ______Amount of Direction from Teacher or Material ______More

Essential Features of Inquiry 1. Learner engages in scientifically oriented questions	1 Full Inquiry Teaching (Can Use Learning Cycle) Learner poses a question	2 Coupled Inquiry (Can Use Learning Cycle) Learner selects among questions, poses new questions	3 Guided Inquiry	4 Directed Inquiry	5 Verification	6 Expository
2. Learner gives priority to evidence in responding to questions	Learner determines what constitutes evidence and collects it	Learner directed to collect certain data	Learner given data and asked to analyze	Learner given data and told how to analyze	Learner given data and told how to analyze that <u>replicates</u> one provided	Learner given no data just conclusions
3. Learner formulates explanations from evidence	Learner formulates explanation after summarizing evidence	Learner guided in process of formulating explanations from evidence	Learner given possible ways to use evidence to formulate explanation	Learner provided with evidence	Learner provided with evidence that replicates conclusions already given	Learner provided with no evidence, only conclusions
4. Learner connects explanations to scientific knowledge	Learner independently examines other resources and forms the links to explanations	Learner directed toward areas and sources of scientific knowledge	Learner given possible connections	Learner provided with connections	Learner provided with connections that <u>replicates</u> one provided	Teacher reports connections
5. Learner communicates and justifies explanations	Learner forms reasonable and logical argument to communicate explanations	Learner coached in development of communication	Learner provided broad guidelines to sharpen communication	Learner given steps and procedures for communication	Learner reports how close to the textbook the conclusions were	Learner reports no conclusions

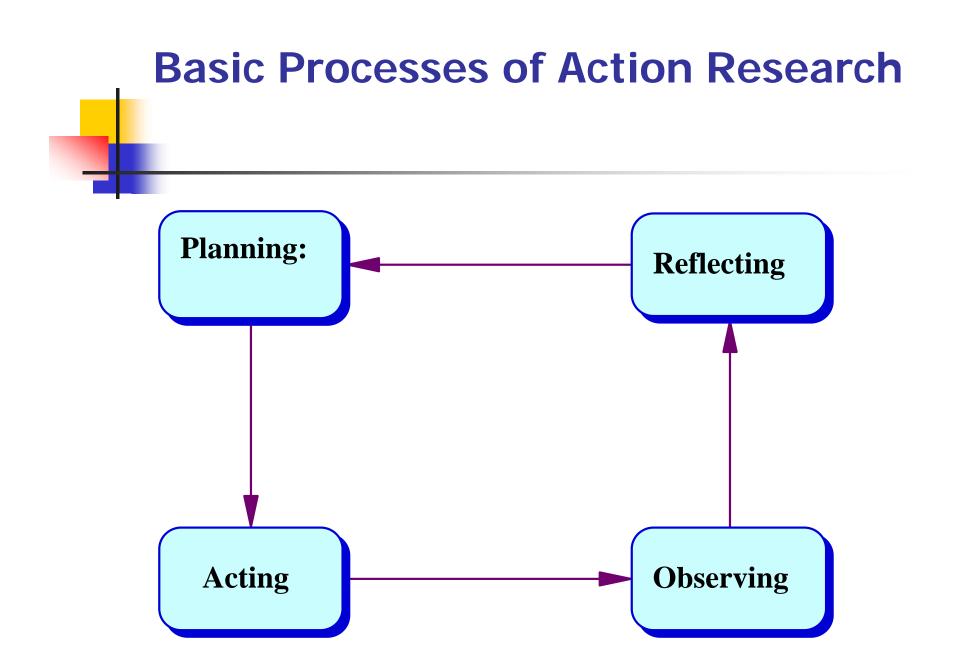

Teacher Action Research

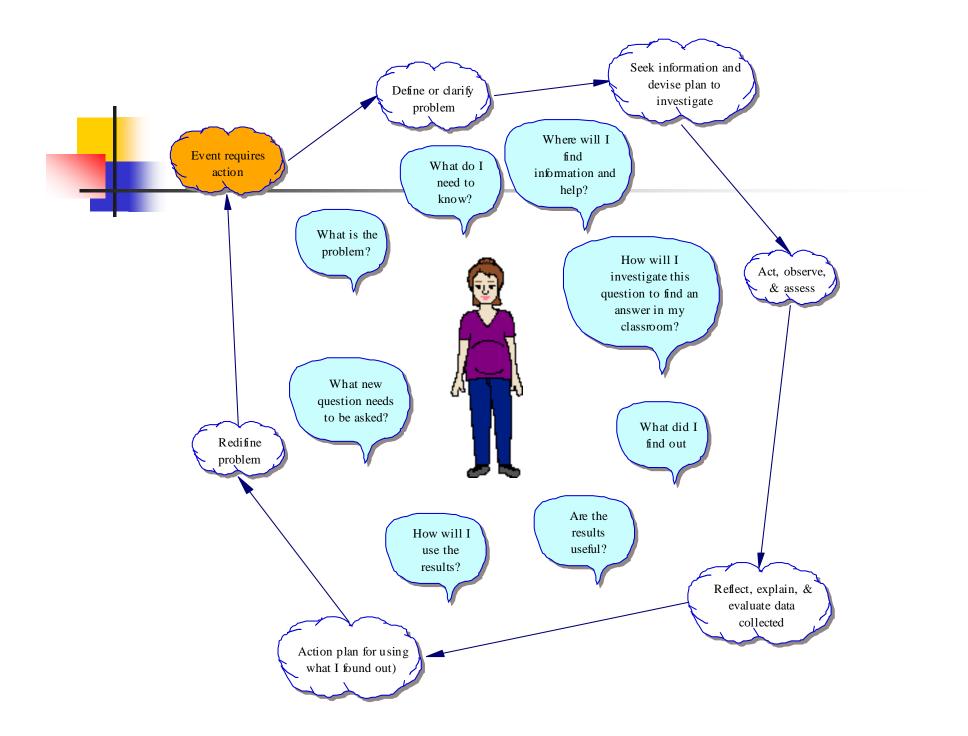

Action Research as a strategy for facilitating change in your physics teaching

Ongoing Action Research Model (perhaps several cycles for a complex innovation)

A Spiraling Process:

- revise focus (redefine problem)
- > modify or use new hypotheses (plan)
- leading to new actions and new data analysis
 (act, observe & assess)
- revise previous conclusions (reflect, explain & evaluate)
- redevelop grounded theory (understand)
- > etc.... in a continuous spiral leading to selfprofessional development and change

Questions

- What are "daily researches?"
- How do we get away from (and convince others- parents, administrators) the belief and view that teaching and learning are "a bag of tricks" we perform each class day?
- Not all research is of equal value. What are the characteristics of professional information on teaching and learning that teachers need to consider and evaluate critically.

Questions

- What is your REAL belief about the statement "Educators who work in ... schools remain unconvinced of the efficacy of most of what gets published in scholarly [research] journals in the field of education?" Do you agree? Explain!
- How can research be a way of knowing for all of us? In what sense is this possible? Aren't there people who do research and the rest of us don't do research, so we have to trust what they tell us?

Questions

- To call yourself an "expert teacher" do you have to be proficient in <u>searching for</u>, <u>reading</u>, <u>planning</u>, <u>writing</u>, and <u>conducting</u> research in your classroom. Explain why or why not! Must all teachers be proficient? Why?
- What is the meaning of "Research provides us with a 'Lens' to consider our practice..."

Question Summary

- Rate yourself on each of these rubrics in the way you deal with research:
- Lack of time 1 2 3 4 5 Have adequate time
- Impractical

 Impractical
 1
 2
 3
 4
 5
- Not Proficient 1 2 3 4 5 Proficient
- Based on these rubrics and other factors do you avoid research in any of its forms (*searching for*, *reading*, *planning*, *writing*, and *conducting*)?
 Explain!

Action Research: Summary

- Note that the question is not, "What should the teacher do next Monday?", but rather "How can you select, adapt, use, or re-conceptualize PTI materials to make learning more productive for students?"
- Action research, also, involves physics teachers in the process of defining, making decisions about, and solving problems leading to their own professional change and growth.

Why Action Research?

- Educational ideas of others are of little real use on their own
- Any "good idea" is a only working hypothesis, not a conclusion. It needs to be tested by you in your physics classroom to gain credibility. Then it becomes <u>our</u> idea that is fully meaningful to us.
- ✓ Successful change must use <u>our</u> ideas

Action Research

- Not a deficit model
- Experience is not enough
- Creates a climate of search for knowledge. This is more likely to produce change than finding answers.
- Not traditional formal research
- Self-reflective inquiry to improve teaching
